Kyiv, Ukraine · Remote / Hybrid

Full-time / Part-time

TECHNICAL SKILLS

C# / .NET

C# 13, .NET 9 / 10, ASP.NET Core Web API, Controllers, Minimal API, Middleware, background services, DI, Options pattern, async/await, CancellationToken, LINQ, records

API & AUTH

REST API design and DTO contracts, JWT access/refresh with rotation, Google OAuth / OpenID Connect, BCrypt, roles and claims, policy-based authorisation, rate limiting, validation, global exception handling, Swagger/OpenAPI, SignalR hubs

FRONTEND — ANGULAR & TYPESCRIPT

Angular, standalone components, signals, RxJS, Router with guards and resolvers, HttpClient interceptors, reactive forms, DI, lazy-loaded features, OnPush change detection, Angular Material, Angular CLI. TypeScript, SPA architecture, typed API clients, client-side caching, mobile-first responsive layouts, light/dark theming

DATA

EF Core, code-first migrations, DbContext, Fluent API, change tracking, PostgreSQL / Npgsql, MySQL, SQLite, Redis, SQL, indexes, transactions, isolation levels, query plans

ARCHITECTURE

Clean and layered architecture, CQRS with MediatR, repository and service patterns, domain entities, value objects, aggregate boundaries, SOLID, DRY, KISS

TESTING

xUnit, Moq, unit and integration testing, Jasmine / Karma, Vitest, Playwright E2E

DEVOPS & OBSERVABILITY

Docker, Docker Compose, GitHub Actions, GitLab CI/CD, Caddy / Nginx reverse proxy, VPS deploy and rollback, Serilog logging, health checks, Linux / Bash (Arch), SSH, Git, Postman, pgAdmin

AI-ASSISTED DEV

Claude Code and OpenAI Codex for scaffolding, refactoring, test generation and review; generated code is checked against project architecture before merge

LANGUAGES

Ukrainian — Native

English — B2

PROFILE

3+ years of fullstack development. I design and deliver production systems end to end: domain model, relational schema and migrations, REST API, authentication and authorisation, TypeScript SPA client, test coverage, containerisation and deployment to a live VPS.

Primary stack: ASP.NET Core over PostgreSQL with EF Core and MediatR, TypeScript on the client. 37k lines of C# and 21k of TypeScript in production, under 1 131 automated tests.

PROJECT EXPERIENCE

Shifter — Shift & Payroll Platform

6 months

Fullstack Developer · production web application · github.com/4booser/Shifter

Shift planning and payroll for hourly-paid staff: schedules, real earnings with overtime, tips and deductions, analytics and payouts.

Server **ASP.NET Core 10 · C# · EF Core 10 · PostgreSQL 17 / Npgsql · MediatR · JWT · BCrypt · Serilog · QuestPDF · Web Push · OpenAPI · xUnit**
Client **TypeScript · Vite · SPA router · typed API client · Tailwind 4 · component library · Vitest**
Infra **Docker Compose · GitHub Actions · Caddy · VPS**

- **Architecture** — Clean Architecture across Domain, Application, Infrastructure and Api projects with dependencies pointing inwards; MediatR request pipeline over repository abstractions and DTO boundaries. 208 endpoints on 30 controllers, 64 entities, 99 EF Core migrations.
- **Data** — two DbContexts on separate PostgreSQL databases for business data and tokens; code-first migrations applied by a dedicated container gated on a database healthcheck, so the API can never start against a stale schema.
- **Domain** — payroll computed entirely server-side: ISO-week overtime scoped per workplace, salary periods, tip-out, meal deductions, proportional split of tips and sales across workplaces, tax base and vacation accrual. 718 xUnit cases over 92 files.
- **Security** — JWT access/refresh with rotation, Google ID-token sign-in, BCrypt, rate limiting; identity resolved from claims only, uniform error contract across 400/401/403/404/409/429, with 404 on foreign resources to prevent enumeration.
- **SPA client** — 12 guarded routes and 24 components in TypeScript, with a typed API layer that transparently refreshes tokens, a client-side query cache with invalidation on write, reactive forms and mobile-first light/dark theming.
- **Offline & integrations** — IndexedDB write queue keyed by date that separates transport failure from server rejection; token-scoped inbound webhooks with a 50-entry delivery log and replay, CSV/XLSX parsing, ICS export, Web Push, QuestPDF reports.
- **Delivery** — 4-service Docker Compose stack, GitHub Actions on every push, Caddy with automatic TLS, immutable tagged images and single-command rollback.

Cafe — Restaurant Back-Office API

8 months

Backend Developer · REST API · github.com/4booser/Cafe

Operations backend for cafe and restaurant chains: ownership hierarchy, staff and access, menus, orders, stock and recipe costing.

Stack **ASP.NET Core 9 · C# · EF Core · PostgreSQL / Npgsql · MediatR · JWT · BCrypt · Serilog · Swagger / OpenAPI · Twilio · Docker**

- **Domain** — 24 entities across 7 aggregates: company ownership, venues, staff with roles and permissions, menus, orders, shifts, warehouses with ingredients and technical cards for recipe costing.
- **Architecture** — layered API with MediatR commands and handlers, repository abstractions, DTO boundaries and structured response envelopes; 3 DbContexts with separate connection strings for business data, tokens and logs, migrated on startup.
- **Security & ops** — JWT Bearer with claims and access/refresh flow, permission-secured endpoints; global exception middleware, Serilog sinks, Swagger contract, Twilio SMS.

EDUCATION

Bachelor's Degree — Software Engineering (121)

National Transport University, Kyiv
