Full-time / Part-time

TECHNICAL SKILLS

BACKEND — C# / .NET

C# 13, .NET 9 / 10, ASP.NET Core Web API, Controllers, Minimal API, Middleware, DI, Options pattern, async/await, CancellationToken, LINQ, records. REST API design, JWT access/refresh with rotation, Google OAuth, BCrypt, roles and claims, rate limiting, DTOs, validation, global exception handling, SignalR real-time hubs, background jobs, Web Push, Swagger/OpenAPI, Serilog

FRONTEND

React 19, TypeScript, Vite, TanStack Query, TanStack Router, Tailwind CSS 4, shadcn/ui + Radix, Zustand, Next.js 15, charts, forms and validation, responsive mobile-first layouts, light/dark theming, PWA, i18n

DATA

EF Core, migrations, DbContext, Fluent API, PostgreSQL / Npgsql, MySQL, SQLite, Redis, hand-written SQL, joins, indexes, transactions, query plans

ARCHITECTURE

Clean and layered architecture, CQRS with MediatR, repository and service patterns, domain entities, value objects, SOLID, DRY, KISS

TESTING

xUnit, Moq, unit and integration testing, Vitest, Playwright E2E, test-first on domain rules

DEVOPS & TOOLS

Docker, Docker Compose, GitHub Actions, GitLab CI/CD, Caddy / Nginx reverse proxy, VPS deploy and rollback, Linux / Bash (Arch), SSH, Git, Postman, curl, pgAdmin, Rider, VS Code

AI-ASSISTED DEV

Claude Code and OpenAI Codex in the daily loop — scaffolding, refactoring, test generation and code review; generated code is read and checked against project architecture before it is merged

LANGUAGES

Ukrainian — Native

English — B2

PROFILE

3+ years of fullstack development. I design and deliver production systems end to end: relational schema and migrations, REST API, SPA client, authentication, test coverage, containerisation and deployment to a live VPS.

Primary stack: ASP.NET Core over PostgreSQL, React 19 with TypeScript. 37k lines of C# and 21k of TypeScript in production, under 1 131 automated tests.

PROJECT EXPERIENCE

Shifter — Shift & Payroll Platform

6 months

Fullstack Developer · production web application · github.com/4booser/Shifter

Shift planning and payroll for hourly-paid staff: schedules, real earnings with overtime, tips and deductions, analytics and payouts.

Server ASP.NET Core 10 · C# · EF Core 10 · PostgreSQL 17 / Npgsql · MediatR · JWT · BCrypt · Serilog · QuestPDF · Web Push · OpenAPI · xUnit

Client React 19 · TypeScript · Vite · TanStack Router / Query · Tailwind 4 · shadcn/ui (Radix) · Zustand · Vitest

Infra Docker Compose · GitHub Actions · Caddy · VPS

- **Architecture** — Clean Architecture across Domain, Application, Infrastructure and Api projects; MediatR request pipeline with repository abstractions and DTO boundaries. 208 endpoints on 30 controllers, 64 entities, 99 EF Core migrations.
- **Data** — two DbContexts on separate PostgreSQL databases for business data and tokens; code-first migrations applied by a dedicated container gated on a healthcheck before the API starts.
- **Domain** — payroll computed server-side: ISO-week overtime scoped per workplace, salary periods, tip-out, meal deductions, proportional split of tips and sales across workplaces, tax base and vacation accrual. 718 xUnit cases over 92 files.
- **Security** — JWT access/refresh with rotation, Google ID-token sign-in, BCrypt, rate limiting; identity resolved from claims only, uniform error contract across 400/401/403/404/409/429, with 404 on foreign resources to prevent enumeration.
- **Integrations** — token-scoped inbound webhooks (sales / hours / both) with a 50-entry delivery log and replay; client-side CSV and XLSX parsing, ICS calendar export, Web Push, QuestPDF reports.
- **Client** — 12 routes and 24 components on TanStack Router with a TanStack Query cache; IndexedDB write queue keyed by date that separates transport failure from server rejection.
- **Delivery** — 4-service Compose stack, GitHub Actions running xUnit and Vitest on every push, Caddy with automatic TLS, immutable tagged images and single-command rollback.

Cafe — Restaurant Back-Office API

8 months

Backend Developer · REST API · github.com/4booser/Cafe

Operations backend for cafe and restaurant chains: ownership hierarchy, staff and access, menus, orders, stock and recipe costing.

Stack ASP.NET Core 9 · C# · EF Core · PostgreSQL / Npgsql · MediatR · JWT · BCrypt · Serilog · Swagger / OpenAPI · Twilio · Docker

- **Domain** — 24 entities across 7 aggregates: company ownership, venues, staff with roles and permissions, menus, orders, shifts, warehouses with ingredients and technical cards for recipe costing.
- **Architecture** — layered API with MediatR commands and handlers, repository abstractions, DTO boundaries and structured response envelopes; 3 DbContexts with separate connection strings for business data, tokens and logs, migrated on startup.
- **Security & ops** — JWT Bearer with claims and access/refresh flow, permission-secured endpoints; global exception middleware, Serilog sinks, Swagger contract, Twilio SMS.

EDUCATION

Bachelor's Degree — Software Engineering (121)

National Transport University, Kyiv
