TECHNICAL SKILLS

BACKEND — NODE.JS / TYPESCRIPT

Node.js, Bun, TypeScript, NestJS, Hono, Express, REST API design, modular architecture and DI, JWT access/refresh, Google OAuth via Passport, RBAC and shared permission contracts, throttling and rate limiting, Zod validation, scheduled jobs, file parsing (XLSX, PDF, XML), OpenAPI

FRONTEND

React 19, TypeScript, Vite, React Router, TanStack Query / Router, Tailwind CSS, shadcn/ui + Radix, Recharts and d3, CodeMirror, i18next, React Native with Expo, responsive mobile-first layouts, light/dark theming, PWA

DATA

PostgreSQL 16 / 17, Drizzle ORM, postgres.js, SQL migrations, hand-written SQL, joins, indexes, transactions, query plans, Redis

ARCHITECTURE

Monorepo workspaces (npm, pnpm, Bun), shared type and schema packages between server and clients, layered and modular services, SOLID, DRY, KISS

AI INTEGRATION

OpenAI, Anthropic and Gemini SDKs, tool calling, prompt design, guardrails and SQL validation over model-generated queries

TESTING

Jest, supertest, bun test, Vitest, Playwright E2E, axe accessibility checks, Biome and ESLint

DEVOPS & TOOLS

Docker, Docker Compose, Nginx, GitHub Actions, VPS deploy and rollback scripts, Linux / Bash (Arch), SSH, Git, Postman, curl, pgAdmin, VS Code

AI-ASSISTED DEV

Claude Code and OpenAI Codex in the daily loop — scaffolding, refactoring, test generation and code review; generated code is read and checked against project architecture before it is merged

LANGUAGES

Ukrainian — Native

English — B2

PROFILE

3+ years of fullstack development on TypeScript. I design and deliver production systems end to end: relational schema and migrations, REST API, web and mobile clients, authentication and authorisation, test coverage, containerisation and deployment to a live VPS.

Primary stack: Node.js and Bun with Hono or NestJS over PostgreSQL, React 19 with Vite. 99k lines of TypeScript in production, under 1 400+ automated tests.

PROJECT EXPERIENCE

Quizzzy — Clinical Assessment Platform

7 months

Fullstack Developer · monorepo: API, web console, mobile app · [github.com/4booser/Quizzzy](#)

Psychodiagnostics for inpatient units: assessment delivery, automated scoring against interpretation norms, alert triage and access audit.

Server [Bun](#) · [Hono](#) · [Drizzle ORM](#) · [PostgreSQL 16](#) · [TypeScript](#) · [Zod](#) · [JWT](#) · [nodemailer](#) · [OpenAPI](#)
Clients [React](#) · [Vite](#) · [React Router](#) · [Radix UI](#) · [TanStack Virtual](#) · [d3](#) · [React Native \(Expo SDK 57\)](#) · [expo-router](#)

Quality & infra [bun test](#) · [Playwright](#) · [axe-core](#) · [Biome](#) · [Docker Compose](#)

- **Architecture** — Bun workspace monorepo, 78k lines of TypeScript: one API serving an 80-screen staff console and a 25-screen Expo patient app, with a shared core package consumed by all three.
- **API** — Hono over Drizzle and PostgreSQL 16: 49 route modules across 76 tables covering assessment batteries, sections, scales with interpretation bands, conditional question logic, scheduling, alerts, referrals, reporting and SPSS export.
- **Shared core** — 102 Zod schemas, the permission matrix, scoring and psychometrics (norms, equating, reliable change index) implemented once and reused by server, web and mobile, so validation cannot drift between tiers.
- **Access control** — role hierarchy, per-patient assignment with expiry and revocation re-checked on every request, break-glass escalation, field-level encryption and a hash-chained audit journal with a CLI verifier.
- **Mobile** — Expo client with biometric unlock, secure token storage, push notifications and offline-tolerant submission; two-language UI from a shared string catalogue.
- **Quality** — 687 test cases across 52 files under bun test, Playwright end-to-end suites, axe accessibility checks, Biome lint and strict TypeScript across all workspaces.

Shifter — Shift & Payroll Platform

6 months

Fullstack Developer · production web application · [github.com/4booser/Shifter](#)

Shift planning and payroll for hourly-paid staff: schedules, real earnings with overtime, tips and deductions, analytics and payouts.

Client [React 19](#) · [TypeScript](#) · [Vite](#) · [TanStack Router / Query](#) · [Tailwind 4](#) · [shadcn/ui \(Radix\)](#) · [Zustand](#) · [Vitest](#) · [PWA](#)

Server & infra [PostgreSQL 17](#) · [REST API](#) · [Docker Compose](#) · [GitHub Actions](#) · [Caddy](#) · [VPS](#)

- **Client** — 12 routes and 24 components on TanStack Router with a TanStack Query cache, Tailwind 4 and shadcn/ui; mobile-first, light and dark themes, installable as a PWA.
- **Offline** — IndexedDB write queue keyed by date that flushes on reconnect and separates transport failure from server rejection; client-side CSV and XLSX parsing, ICS calendar export.
- **Server** — designed and built the REST API and PostgreSQL schema myself, including the payroll engine (overtime, salary periods, tip-out, deductions, tax) under 718 automated tests.
- **Delivery** — 4-service Docker Compose stack, full suite on every push through GitHub Actions, Caddy with automatic TLS, immutable tagged images and single-command rollback.

EDUCATION

Bachelor's Degree — Software Engineering (121)

National Transport University, Kyiv
